

# Battery Box

HAZARDOUS  
HANDLING

A tough and durable container suitable for the collection, storage and transportation of used batteries.

Battery Boxes are supplied with a snap-fitting hinged lid with two clips to keep the lid secure and the contents safe.

Small footprints enable the containers to be used in areas where space may be limited. All boxes stack to make efficient use of space when being transported and will fit onto a standard Euro pallet.

Battery Boxes are available in two sizes; 9 and 20 litres and can be supplied as either two or three compartment versions.

Two apertures enable the separation of batteries and button cells, and the three compartments allow for the additional separation of NiCad batteries.

Product	Capacity (litres)	Overall Dimensions (mm)
Battery Box	9	300 (w) x 200 (d) x 223 (h)
Battery Box	20	400 (w) x 300 (d) x 233 (h)
